LANGUAGES

- Danish — native
- English — fluent

KEY STRENGTHS

- Identity & access management (IAM)
- Access governance & certification
- Privileged access management (PAM)
- Directory services, authentication & MFA
- Joiner-mover-leaver & provisioning
- NIS2, GDPR, ISO 27xxx & audit readiness
- Product ownership: vision, roadmap, priorities
- Programme & project management
- Advice at executive level
- AI in development work

AT A GLANCE

- 12+ yrs identity & security
- 8 yrs owning an IAM product
- 32+ yrs enterprise IT

PROFILE

12+ years dedicated to IAM and cyber security — eight of them owning an identity platform end to end, from vision and roadmap to running it for customers in both the private and the public sector. Alongside that: IT strategy and practical, daily experience with AI in development work.

FIELDS

Identity & access management ■ SPECIALISM

- **Access governance & certification** — certification campaigns with escalation up the management chain, a role-based access model and self-service requests with approval workflows.
- **Privileged access** — governance for privileged roles: direct assignment only, a dedicated certification cadence and just-in-time activation instead of standing privilege.
- **Directory services & authentication** — Microsoft Entra ID for account lifecycle, group and licence assignment, session policy and step-up MFA on sensitive operations.
- **Joiner-mover-leaver** — automated lifecycle: accounts ready before the first working day, roles across systems, and offboarding that closes sessions, releases licences and enforces quarantine and retention.
- **The data foundation** — integration with the major HR and payroll platforms, so the data behind each digital identity is correct at source.
- **Reconciliation & evidence** — reporting that gives auditors durable documentation of who has access to what, and why.

Security & compliance ■ SPECIALISM

- **Regulation in practice** — NIS2, GDPR, ISO 27xxx and ISAE turned into something that can be built, operated and documented.
- **Audit readiness** — immutable audit logs, compliance reporting and documentation that holds up when the auditor asks.
- **Assessing solutions and vendors** — a sober judgement of what actually covers the need, and what merely looks good in a demo.
- **Programme management of compliance projects** — prioritised by risk rather than by whatever is easiest to start.
- **Broad security background** — endpoint and perimeter protection, vulnerability and policy management, data loss prevention and encryption.
- **Critical infrastructure** — running an AWS platform with 50,000+ users across public and private organisations.

AI — development and business

- **AI in development work** — daily, hands-on work with Claude Code rather than theoretical familiarity.
- **Assessing value** — where AI moves the needle for the business, and where it becomes technology for its own sake.
- **On-premises versus cloud** — when local AI infrastructure makes sense rather than pure cloud subscriptions.
- **Automation as a control** — AI and automation used to raise the security level, not only to save time.
- **A bridge between development and business** — translation both ways, so both sides understand what is possible and what it costs.
- **From idea to production** — AI-supported development all the way: from first idea to tested and documented code ready for production.

IT strategy & leadership

- **Strategy and architecture** — direction for IT anchored in what the business actually needs.
- **Programme and project management** — with milestones that can be tracked and a prioritisation that can be defended.
- **Needs clarification and vendor selection** — from requirements to negotiation.
- **Migration** — managing the move from one system to another without losing control along the way.
- **Advice at executive level** — sparring with CIOs, CISOs and DPOs on strategy, risk and investment.
- **Full ownership** — eight years responsible for finances, people, legal and customer relationships in my own company.

EXPERIENCE

Founder & CEO — in practice also product owner

ID CONNECT A/S — 2018 – 2026

Built the company around an identity platform that enables customers to meet and document the access requirements in NIS2, GDPR and ISO 27xxx. I set the vision and roadmap, decided what was built, and prioritised development, operations, support and compliance. The platform ran on AWS and served more than 50,000 users across public and private organisations, including the Greenlandic energy sector.

Territory Manager, NetIQ Denmark

MICRO FOCUS – 2014 – 2018

Responsible for NetIQ — the security division of Micro Focus — in Denmark: identity & access management, access governance, privileged account management and security & risk management. Advised CISOs, CIOs and heads of infrastructure in both private and public organisations on identity programmes, and translated regulation and risk into concrete roadmaps and business cases.

Enterprise Account Manager

SYMANTEC – 2008 – 2014

Six years with some of the world's leading security technologies, sold and advised at C-level in Denmark's most regulated industries. The work covered three disciplines:

- **Data protection** — enterprise backup with NetBackup, archiving with Enterprise Vault, plus high availability and storage management with Veritas Storage Foundation and Cluster.
- **Device protection** — endpoint and perimeter protection of workstations and servers in large, complex environments.
- **Information protection** — data loss prevention (DLP) and encryption, supplemented by policy and vulnerability management for compliance purposes.

EARLIER CAREER

- **2007 – 2008 – VP, Managing Director**, Mondo Hosting A/S — P&L responsibility for a hosting business with approx. DKK 50m in revenue and consolidation of several acquired companies.
- **2004 – 2007 – Sales Manager**, Mondo A/S — direct and indirect sales of hosting services, channel building and business development.
- **2000 – 2004 – Channel Manager**, StorageTek — started in direct sales of storage and backup solutions, then built the Danish partner channel from scratch.
- **1994 – 2000 – Sales Manager**, EDB Gruppen / Dolberg Data — ERP and infrastructure projects, from sales rep to sales manager with responsibility for a team of six.
