LANGUAGES

- Danish — native
- English — fluent

KEY STRENGTHS

- Identity & access management (IAM)
- Access governance & certification
- Privileged access management (PAM)
- Directory services, authentication & MFA
- Joiner-mover-leaver & provisioning
- NIS2, GDPR, ISO 27xxx & audit readiness
- Product ownership: vision, roadmap, priorities
- Programme & project management
- Advice at executive level
- AI in development work

AT A GLANCE

- 32+ yrs enterprise IT
- 8 yrs leadership & P&L responsibility
- 18 yrs cyber security & IAM

PROFILE

32 years in enterprise IT – leading complex IT deliveries across outsourcing, cloud, SaaS and software development. Eight of them as founder and CEO with responsibility for product, operations and the business. Cyber security, identity & access management and AI are where I go deepest.

FIELDS

IT leadership & project management ■ SPECIALISM

- **Strategy and architecture** — I set direction for IT, anchored in what the business actually needs.
- **Programme and project management** — I manage towards milestones that can be tracked and a prioritisation that can be defended.
- **Vendor management and contract negotiation** — I take you from requirements to negotiation, and follow up on agreed service levels.
- **Business cases and decision papers** — I turn needs and risk into a decision basis leadership can act on.
- **Advice at executive level** — I spar with CIOs, CISOs and DPOs on strategy, risk and investment.
- **Full ownership** — I have had eight years of responsibility for finances, people, legal and customer relationships in my own company.

Cyber security ■ SPECIALISM

- **Regulation in practice** — I turn NIS2, GDPR, ISO 27xxx and ISAE into something that can be built, operated and documented.
- **Audit readiness** — I deliver immutable audit logs, compliance reporting and documentation that holds up when the auditor asks.
- **Assessing solutions and vendors** — I make a sober judgement of what actually covers the need, and what merely looks good in a demo.
- **Programme management of compliance projects** — I prioritise by risk, not by whatever is easiest to start.
- **Broad security background** — I draw on experience with endpoint and perimeter protection, vulnerability and policy management, data loss prevention and encryption.
- **Critical infrastructure** — I have run an AWS platform with 50,000+ users across public and private organisations.

Identity & access management

- **Access governance & certification** — I introduce certification campaigns with escalation up the management chain, a role-based access model and self-service requests with approval workflows.
- **Privileged access** — I set governance for privileged roles: direct assignment only, a dedicated certification cadence and just-in-time activation instead of standing privilege.
- **Directory services & authentication** — Uses Microsoft Active Directory and Microsoft Entra ID for account lifecycle, group and licence assignment, session policy and step-up MFA on sensitive operations.
- **Joiner-mover-leaver** — I automate the lifecycle: accounts ready before the first working day, roles across systems, and offboarding that closes sessions, releases licences and enforces quarantine and retention.
- **The data foundation** — I integrate with your HR and payroll platforms, so the data behind each digital identity is correct at source.
- **Reconciliation & evidence** — I deliver reporting that gives auditors durable documentation of who has access to what, and why.

AI & digitalisation

- **AI in development work** — I work daily, hands-on with Claude Code rather than theoretical familiarity.
- **Assessing value** — I point to where AI moves the needle for the business, and where it becomes technology for its own sake.
- **Digitalising business processes** — I have driven automation and digitalisation initiatives within finance, sales and marketing, from idea to operation.
- **Automation as a control** — I use AI and automation to raise the security level, not only to save time.
- **A bridge between development and business** — I translate both ways, so both sides understand what is possible and what it costs.
- **From idea to production** — I deliver AI-supported development all the way: from first idea to tested and documented code ready for production.

EXPERIENCE

Founder & CEO — in practice also product owner

ID CONNECT A/S – 2018 – 2026

Eight years with full P&L, product and operations responsibility for a SaaS identity platform on AWS with more than 50,000 users across public and private organisations, including the Greenlandic energy sector. I set the vision and roadmap, decided what was built, and built the platform so customers can meet and document the access requirements in NIS2, GDPR and ISO 27xxx.

Territory Manager, NetIQ Denmark

MICRO FOCUS – 2014 – 2018

Responsible for NetIQ — the security division of Micro Focus — in Denmark: identity & access management, access governance, privileged account management and security & risk management. Advised CISOs, CIOs and heads of infrastructure in both private and public organisations on identity programmes, and translated regulation and risk into concrete roadmaps and business cases.

Enterprise Account Manager

SYMANTEC – 2008 – 2014

Six years with some of the world's leading security technologies, sold and advised at C-level in Denmark's most regulated industries. The work covered three disciplines:

- **Data protection** — enterprise backup with NetBackup, archiving with Enterprise Vault, plus high availability and storage management with Veritas Storage Foundation and Cluster.
- **Device protection** — endpoint and perimeter protection of workstations and servers in large, complex environments.
- **Information protection** — data loss prevention (DLP) and encryption, supplemented by policy and vulnerability management for compliance purposes.

EARLIER CAREER

- **2007 – 2008 – VP, Managing Director**, Mondo Hosting A/S — P&L responsibility for a hosting business with approx. DKK 50m in revenue and consolidation of several acquired companies.
- **2004 – 2007 – Sales Manager**, Mondo A/S — direct and indirect sales of hosting services, channel building and business development.
- **2000 – 2004 – Channel Manager**, StorageTek — started in direct sales of storage and backup solutions, then built the Danish partner channel from scratch.
- **1994 – 2000 – Sales Manager**, EDB Gruppen / Dolberg Data — ERP and infrastructure projects, from sales rep to sales manager with responsibility for a team of six.
